Silencer Task Manual

Features:
- Stores your question-answer cards and your per session progress in the server.
- Lightweight UI focused on learning.
- Uses minimal internet bandwidth.
- User authentication accounts

Usage:
- SignIn or SignUp yourself in the app.
- You can add any number of card to learn from the Add Card button on Home Screen.
- While learning tap the card to flip it and reveal the answer to the question for reference.
- Use the Correct and Incorrect button for evaluating your answer. Incorrect questions will be asked more frequently than correct ones to help you learn them better and faster.
- Donot exit in between the session, this may result in you revisiting the questions.

Installation:
- Install node_modules for both Backend/ and Silencer/ subdirectories by typing
    `$npm install / $yarn install`
    in the terminal opened in the subdirectory.
- Start the server from the Backend/ subdirectory by typing
    `$npm start / $yarn start`
    in the terminal opened in the subdirectory.
- Change the server address in Silencer/axios/axios.tsx by updating the baseURL variable with your own local ip address.
- Install the application in emulator or physical device with
    `$npx react-native run-android / $npx react-native run-ios`
